## LANCOM VoIP USB Handset

- Robust design and high-quality audio
- Automatic detection by LANCOM Advanced VoIP Client
- Intuitive operation, just like a normal telephone
- Mute, loudspeaker, incoming call signaling
- Connector for headset

The LANCOM VoIP USB Handset is an ideal supplement to the LANCOM Advanced VoIP Client. As an alternative to telephone headsets, the familiar and intuitive operation often acts to increase the acceptance of VoIP telephony.

In combination with the LANCOM Advanced VoIP Client, a host of options are available to replace the outmoded, time-consuming and frequently incorrect keying in of telephone numbers. These include the direct dialing of contacts in Microsoft Outlook, Lotus Notes, from any business application supporting TAPI, or even with "Click-to-Dial" from any application under Microsoft Windows 2000 or XP.

When the receiver of the LANCOM VoIP USB Handset is lifted from its cradle, the LANCOM Advanced VoIP Client appears in the foreground and opens a line. The focus of attention is on the on-screen PC keypad and a telephone number can be entered at the numerical keyboard. Incoming calls with this combination are answered very simply by lifting the receiver—just as with a conventional telephone.

The LANCOM VoIP USB Handset provides high-quality audio when speaking via the receiver or in loudspeaker mode, and incoming calls are signaled both acoustically and optically. Keys on the telephone control the speaker volume, mute function and headset activation (a headset can optionally be connected to the LANCOM VoIP USB Handset).

Installation is as simple as it gets with Plug & Play support under Windows 2000 and Windows XP, and detection by the LANCOM Advanced VoIP Client is automatic.

The LANCOM VoIP USB Handset is the ideal add-on to the Advanced VoIP Client

<b>Functions</b>	
	Hook on/off support
	Sound volume at the receiver set by function keys
	Mute key
	Incoming call signal via internal loudspeaker
<b>Headset support</b>	
	Activation and control of headset via separate key
	Headset connector for standard PC headset, 2 x 3.5mm mini-jack
<b>Connections</b>	
	Power supply via PC
	USB 1.1 or higher
<b>Housing</b>	
	Plastic, color manganese
<b>System requirements</b>	
	Microsoft Windows 2000 or XP
	PC with USB 1.1 or higher
<b>Accessories</b>	
	LANCOM Advanced VoIP Client for Windows 2000-XP, single license, item no. 61610
	LANCOM Advanced VoIP Client for Windows 2000-XP, 10 licenses, item no. 61611
<b>Item number</b>	
LANCOM VoIP USB Handset	61612
