

LANCOM VoIP-32 Option

Upgrade for Business VoIP Routers

- Upgrading to up to 32 SIP subscribers

The VoIP-32 Option extends a LANCOM Business VoIP Router to 32 local SIP subscribers.

More than just a new PBX.

The combination with SIP telephones allows for a 32 subscribers solution in a compact box at minimal costs. Adding a SIP trunk as a replacement for the traditional point-to-point DDI ISDN exchange line makes it a modern unified speech & data solution at an unmatched price-performance ratio compared to classical PBX systems.

More Telephony.

With the VoIP-32 Option up to 32 SIP subscribers - in the LAN with softphones or desktop devices, from the Internet or via VPN - can be registered at the same LANCOM Business VoIP Router and use all telephony functionalities simultaneously.
